Bilateral Meetings

- (14.00-16.00)

Description

The company's geospatial services cover both data collection and accurate data processing. The reference works of the company include modelling and digitising of historically significant buildings in Hungary using drone and laser scanner. The company also have experience in surveying monumental buildings, churches and large stretches of coastline. Unlike other competitors, the company does not only advise, but also carries out designs that require specialised knowledge. Several major international companies in Hungary consider the company as official partners.

The products are complementary to the drone industry in transport and data recording. Both products are developed in-house. They are innovations that are successfully used worldwide.

The company's fresh innovation is a web platform where drone businesses become visible and business partnerships in the drone service industry will be possible. Our goal is to provide a worldwide platform for potential partners to find droners anywhere in the world. With a colourful profile, drone freelancers can increase their chances of being found by potential clients. We are confident that we can build a global drone community.
